INTRODUCTION

On Wednesday 6 September 2023 we are excited to offer 75 Angus bulls for sale at Hillgrove, Boorowa. This year's offering includes 60 S bulls and 15 18-month old T bulls.

Coming off the back of a notable fall in cattle prices, the cattle market is in a much more challenging position than it was a year ago. 2024 looks to be the year where we will start to see prices improve, driven by tightening supply rather than an increase in demand. When we look back at global Grain Fed beef production, the world is producing roughly the same amount today as it was 20 years ago. This is despite the fact that there are now significantly more people and more wealth.

With the USA likely entering a herd rebuilding phase in 2024 and peaking in 2025/ 2026 we are going to see increased pricing from a reduced pool of premium Grain Fed beef. Competition from Australia's three major Asian customers – China, Japan and Korea – will increase as the supply of US Grain Fed exports starts to diminish. The US is already retaining more of its Grain Fed beef for its own domestic market.

Over the last year our beef business, KC Natural, has continued its feeding and processing of Grain Fed Angus beef which we have been exporting mostly as chilled beef to China. This program has given us full traceability of the genetics we are using and feedback on the performance of our cattle at every stage of the supply chain. More on this below.

Now to the bulls...

Our sire selection for the bulls on offer continues to meet our guideline – breed for the optimum, not the maximum. The core focus in our bull breeding is for focused carcass genetics from high performing, moderate, fertile and functional cattle.

This year's bulls are the product of a cow herd which is run under commercial parameters with all females assessed annually to ensure they are meeting each of our breed values.

Over 85% of our bulls are from AI sires (all T bulls are embryo calves). Dunoon Prime Minister is well represented with 16 sons, as are Baldridge Beast Mode with 15 sons, Lawsons Momentous with 12 sons, Chiltern Park Moe with 11 sons and Milwillah Napa with 5 sons.

Once again, all of our 2023 sale bulls have been successfully parent verified using genomic testing.

Over 95% of our catalogued S bulls have been working as yearlings in both our commercial and stud programs. Before they go out to work and again before this sale all bulls must pass a structural assessment and fertility test. This process gives us increased confidence in selling the bulls. The S bulls have recently come onto crop and the T bulls (who have not worked) have been fed on improved pasture.

We remain focused on our in-herd measurements, genomics and EBV performance to ensure our cattle perform at each stage of the production cycle. Carcass traits remain key in our beef export business, and we are seeing a high level of consistency in achieving MB3+ on our KCA 150 day Grain Fed Angus.

The steers are bred and backgrounded at Breakfast Creek Station, finished at The Mount Feedlot, Forbes and processed at Bindaree, Inverell.

As a stud, we continue to focus on high performing cattle and this year's offering demonstrates:

- Calving ease
  - 30 bulls below breed average for birth weight
  - 40 bulls above breed average for calving ease direct
  - 48 above breed average for calving ease daughters
- Performance
  - 59 bulls above breed average for 200 day weight
  - 57 bulls above breed average for 400 day weight
  - 55 bulls above breed average for 600 day weight
  - 60 bulls above breed average for docility
- Carcass quality
  - 40 bulls above breed average for EMA
  - 43 bulls above breed average for Rib
  - 51 bulls above breed average for IMF
  (36 bulls have an IMF greater than 3)
- Fertility
  - 51 bulls above breed average for scrotal size

If you would like to inspect the bulls before sale day please contact myself or David. The bulls were videoed on Monday 24 July, where they were in forward condition and coming out of their winter coats. They still have some growing to do over the next four weeks - particularly after working this year. Short videos are available on our website, along with links to the relevant information on the Angus Australia website.

We are looking forward to welcoming you to join us for the sale in person. If you are unable to make it, the sale will be run through Auctions Plus and we will continue to do everything we can to make the virtual experience of purchasing a bull as informative and comprehensive as possible.

Sam Burton Taylor
August 2023

NOTICES

HEALTH AND SAFETY OF VISITORS

Visitors enter the pens at their own risk. Children under 16 and people with reduced mobility or who require the use of aids are requested not to enter pens.

Under normal conditions all animals are considered to be docile in temperament, however on sale days conditions are different, and stress levels may be heightened, causing animals to behave unpredictably.

While we do not expect any issues it is important that visitors are aware of their surrounds, remain alert at all times, and acknowledge the risks associated with the sale.

SALE CATALOGUE

All reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor nor the selling agents make any other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information included in this catalogue. You are encouraged to seek independent verification of any information provided in this catalogue before relying on such information.

PARENTAGE

We have tested all bulls in the sale to the highest available parent verification standards offered by Angus Australia. All S and T bulls have been successfully parent verified by genomic testing.

REGISTRATION AND PRIVACY INFORMATION

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by the vendor and Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form on their website and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the storage and disclosure of such information.

SEMEN RIGHTS

Kenny's Creek retains the right to collect semen for in-herd use from any bulls sold in the sale at our expense and at the convenience of the purchaser.

THE KENNY'S CREEK CONNECTION

CONNECTION TO COMMERCIAL PRODUCTION VALUES

- We purchase Kenny's Creek female bloodlines from clients for joining.
- We run our own 2,000 cow commercial Angus herd which provides a benchmark on performance.
- We are our own bull client. Each year our bulls are used internally as back up to our fixed time Artificial Insemination (AI) program.
- We manage a commercial feedlot (The Mount, Forbes), allowing us to purchase clients' feeder steers and match data from feedlot performance to genetics and EBVs.

CONNECTION TO INTERNATIONAL MARKETS

- We travel nationally and abroad to analyse the best genetics and new cattle technologies, giving us insight into world cattle and beef markets.
- KC Natural is a processor, exporter, wholesaler and retailer – giving us unique insight into each level of the supply chain.
- We gather feedback on carcase performance to link to Kenny's Creek Angus genetic programs.

CONNECTION TO OUR BULL CLIENTS

- Our deep understanding of the industry helps us to understand and tailor genetics to our clients' herds.
- We focus on the results of clients' breeding strategies by being an active participant in the marketing of livestock and purchasing through our buy back program.

KENNY'S CREEK

PERFORMANCE AND ANIMAL HEALTH

HEALTH STATUS

BioCheck Biosecurity Plan: The Kenny's Creek Angus herd at Hillgrove, Boorowa has been assessed and tested under the BioCheck Biosecurity Plan and is rated as J-BAS 7.

Pestivirus: Pestivirus is an endemic viral disease in Australia. There is serological evidence of pestivirus in over 70% of beef herds in NSW. The Kenny's Creek pestivirus management plan mandates annual vaccinations of all cattle. Each of our sale bulls have been PI-Antigen tested for Pestivirus (ear notch test) and received a negative result.

INDEPENDENT ASSESSMENT BY CHRIS SAUNDERS FROM PRECISION BREEDING

All of our bulls have been independently evaluated for structural soundness and fertility, in particular:

1. Semen tested
2. Scrotal palpated
3. Structurally assessed

HEALTH MANAGEMENT

After you have purchased a low risk bull it is important to manage him correctly to ensure a long, effective working life. Ensure you vaccinate your bulls annually with 7 in 1 and vibrio vaccine. All Kenny's Creek Angus bulls have had their initial two vaccinations and now only require annual vaccination.

Monitor the body condition of your bulls and maintain a condition score of 3. Young bulls require good nutrition. Don't allow your bulls to become overly fat, as fat bulls have a greater risk of injury and also achieve poorer conception rates.

The variation in climatic conditions (temperature extremes) and grazing conditions in Central and Northern Queensland can have a large effect on the quality of semen the bull produces. It is recommended that after you purchase a new bull and relocate him to a new grazing environment that you have his semen examined prior to joining.

MONITORING NEW BULLS

Any new bulls being joined for their first time are at a greater risk of achieving poor conception rates due to injury or infection. It is therefore important to monitor new bulls closely.

What to look out for:

- Lameness
- Swelling in the area of the penis or testicles
- Penis unable to be exteriorised from the sheath
- Inflamed or reddened penis
- Bulls attempting to mount but not serving
- Any signs of systemic disease i.e. lethargic
- Cows still in estrus towards the end of the joining period

In well managed herds we expect 60–70% of conception to occur in the first 3 weeks. It is extremely important to monitor new bulls during this period. Cows joined to new bulls need to be inspected 2–3 times per week for the first 3 weeks then weekly thereafter.

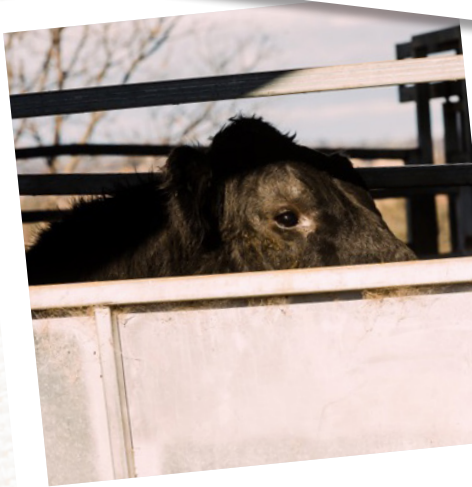
It is important to remember that problems can develop during the joining period. Some of these problems cannot be prevented, so early detection is the only way to minimise their impact.

FEET AND LEGS

Great attention is paid to both the feet and legs of animals as part of the Kenny's Creek breeding program to ensure their longevity and working lifespan. It is important to note that no feet are ever trimmed and any identified animals with structural issues are removed from the breeding herd.

TEMPERAMENT

Temperament has been assessed constantly across the whole herd over the last 30 years. All working bulls are selected in part for their libido and fertility attributes and as such require an understanding management approach to their handling.



THE KENNY'S CREEK PROGRAM

The selection and breeding program at Kenny's Creek is driven by a rigorous and non-emotional approach to genetic selection. Our key motivation is to produce trouble free performance bulls for our clients.

A brief summary of our approach is as follows:

SIRE SELECTION

Kenny's Creek is at the forefront of utilising structural information about our breeding herd, with each animal assessed rigorously. We have developed systems to analyse the data collected and rank the performance of sire and cow lines, enabling us to react early to structural issues inherited by sire lines.

Our sires are comprehensively examined, including progeny, dams, granddams, sisters and any other family members available. Through tightly researched breeding principles and high accuracy parents, we aim for a low cull rate in bulls presented for sale – we believe this means more predictable progeny for our clients' herds.

Once sires have passed this assessment we then look at EBVs, either on Angus Breedplan or multi-breed Breedplan, keeping in mind some of our clients sell steers to the domestic market and some look at the Long Fed index. We are not a "one-index" breeder.

INDEPENDENT ASSESSMENT

All our bulls have been independently evaluated for structural soundness and fertility. The detailed methodology for these assessments is set out under 'Performance and Animal Health'.

OUR GUARANTEE

To the best of our knowledge all bulls are in sound working condition at the time of the sale. If, during the next 12 months, a bull becomes infertile or breaks down, provided it is not caused by injury sustained or illness contracted after leaving Kenny's Creek Angus, we will:

- replace the bull with as close a match as possible; or
- grant a full credit (less any salvage value) for any purchase at future Kenny's Creek Angus sales.

BUY BACK PROGRAM

Each year we buy back heifers and feeder steers from our Kenny's Creek Angus clients.

Our objective with the buy back program is to provide premium prices to our bull clients.

Kenny's Creek new stud best

BY **HANNAH POWE**

The $45,000 high-seller, Kenny's Creek Keystone R105, with Sam Burton Taylor and his son Angus, 7, Kenny's Creek Angus, Boorowa, and auctioneer Luke Whitty, KMWL, Forbes.

REPEAT volume buyers at the Kenny's Creek Angus Bull Sale on Wednesday last week chased prices into unseen territory for the stud, eclipsing previous benchmarks and allowing the Burton Taylor family to set two new personal bests.

Overall, it was a full clearance of 68 bulls sold to a top of $45,000 and average of $16,809. Both were new records for Kenny's Creek.

This result near doubled last year's top price of $23,000, while the average also grew $4778 compared to the $12,031 average achieved last year.

It was an undisclosed repeat buyer from the Central West region which secured the $45,000 sale-topper as well as four other high-selling bulls.

Kenny's Creek Keystone R105 was the top-priced bull which spurred interest from stud and commercial buyers offering a high-ranking data set with 10 traits in the top 15pc of the breed or higher.

He is a bull with a lot of muscle and his spread from birthweight to 600-day weight, coupled with high carcase weight, eye muscle area (EMA) and intramuscular fat (IMF) figures made him an attractive package, Sam Burton Taylor said.

Keystone R105 was in the top 1pc carcase weight and milk, top 5pc for 400- and 600-day weights, and top 10pc for 200-day weight and rib fat.

Sired by Landfall Keystone K132 and out of Kenny's Creek Bara N23, a daughter of Esslemont Lotto L3, he weighed 834 kilograms at 24 months of age with a scrotal circumference of 39cm.

The same undisclosed buyer purchased the $32,000 second-top priced Kenny's Creek Keystone R50, also by Landfall Keystone K132.

Out of a Kenny's Creek Intensity L123 daughter in Kenny's Creek L123 P150, the 25-month-old weighed 944kg and ranked in the top 1pc for 200-, 400- and 600-day weights, mature cow weight, and carcase weight.

In all, the undisclosed buyer bought five at a $32,600 average.

The largest volume purchasers were undisclosed repeat buyers from western NSW which purchased seven bulls averaging $17,429, and Yammatree Family Trust, Bethungra, with six for a $14,167 average.

James Plowman of Plowman Pastoral Pty Ltd, a large-scale Angus breeding operation northeast of Bathurst, paid an average of $15,333 across his draft of three bulls which will be used within the self-replacing operation which targets the 440-480 kilogram feedlot entry market.

Mr Plowman said he had been buying bulls from Kenny's Creek for approximately five years, and he believes the Burton Taylor family does a good job at providing high-indexing bulls for a reasonable price.

"Based on price and how they performed from an Angus breed index point of view, the bull's reliability and ability to produce good progeny is what keeps us coming back," he said.

This year Mr Plowman was looking to diversity in the sire line to introduce new genetics, as well as heifer bull options.

"The bulls are well presented, and Sam's support of his clientele both with information and availability makes him a great 'partner'," he said.

A charity auction and raffle which raised $14,170 was also held in conjunction with the sale to raise funds for former professional NRL player Nathan Stapleton who was left quadriplegic after suffering a spinal cord injury while playing rugby union in country NSW.

Selling agents were Kevin Miller, Whitty Lennon and Co (KMWL) with Luke Whitty as the auctioneer.

THE CHECKLIST

- CALVES WEIGHED AND TAGGED AT BIRTH
- WEIGHED AT 200, 400 AND 600 DAYS
- COWS WEIGHED FOR MATURE COW WEIGHT
- GENOMIC TESTING FOR PARENT VERIFICATION, PRODUCTION TRAITS AND RECESSIVE GENES
- INDEPENDENTLY ASSESSED FOR STRUCTURE, LEGS, FEET, SHEATH AND TEMPERAMENT
- BULL SOUNDNESS EXAMINATION CONDUCTED BY PRECISION BREEDING – CHRIS SAUNDERS
- JBAS-7 BIOSECURITY PLAN
- BLOOD TESTED NEGATIVE FOR PESTI VIRUS. ANNUAL PESTIGUARD VACCINATED (ANNUAL VACCINATION RECOMMENDED)
- 7-IN-1 VACCINATION
- VIBRIOSIS VACCINATION (2 INITIAL + 1 PRE SALE) AND SOLD WITH A LIFETIME ANIMAL HEALTH RECORD
- ALL BULLS HAVE THREE FORMS OF IDENTIFICATION – TAG, NLIS AND FREEZE BRAND
- KENNY'S CREEK GUARANTEE
- SOCIETY TRANSFER IF REQUESTED

STRUCTURAL ASSESSMENT

KENNY'S CREEK STRUCTURAL PROGRAM

The 2023 Kenny's Creek Spring sale bulls have been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft. The Kenny's Creek sale bulls were assessed by Chris Saunders of Precision Breeding on 1 June 2023.

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name are as follows:

PV: both parents have been verified by DNA
SV: the sire has been verified by DNA
DV: the dam has been verified by DNA
#: DNA verification has not yet been conducted
E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

UNDERSTANDING THE TRANS TASMAN ANGUS CATTLE EVALUATION

TACE (TransTasman Angus Cattle Evaluation) is the genetic evaluation program adopted by Angus Australia for Angus and Angus infused beef cattle. TACE uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

TACE includes pedigree, performance and genomic information from the Angus Australia and New Zealand Angus Association databases to evaluate the genetics of animals across Australia and New Zealand. TACE analyses are conducted by the Agricultural Business Research Institute (ABRI), using software developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England. Ongoing TACE research and development is supported by Meat and Livestock Australia.

WHAT IS AN EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

USING EBVS TO COMPARE THE GENETICS OF TWO ANIMALS

Angus BREEDPLAN EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

USING EBVS TO BENCHMARK AN ANIMAL'S GENETICS WITH THE BREED

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia and New Zealand.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to:

- the breed average EBV
- the percentile table

The current breed average EBV and percentile table is provided in these explanatory notes.

CONSIDERING ACCURACY

An accuracy value is published in association with each EBV, which is usually displayed as a percentage value immediately below the EBV. The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

DESCRIPTION OF ANGUS BREEDPLAN EBVS

EBVs are calculated for a range of traits within the TransTasman Angus Cattle Evaluation, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this sale catalogue is provided below.

BIRTH

Calving Ease Direct (%): Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers. Higher EBVs indicate fewer calving difficulties in 2 year old heifers.

Calving Ease Daughters (%): Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age. Higher EBVs indicate fewer calving difficulties in 2 year old heifers.

Gestation Length (days): Genetic differences between animals in the length of time from the date of conception to the birth of the calf. Lower EBVs indicate shorter gestation length.

Birth Weight (kg): Genetic differences between animals in calf weight at birth. Lower EBVs indicate lighter birth weight.

GROWTH

200 Day Growth (kg): Genetic differences between animals in live weight at 200 days of age due to genetics for growth. Higher EBVs indicate heavier live weight.

400 Day Weight (kg): Genetic differences between animals in live weight at 400 days of age. Higher EBVs indicate heavier live weight.

600 Day Weight (kg): Genetic differences between animals in live weight at 600 days of age. Higher EBVs indicate heavier live weight.

Mature Cow Weight (kg): Genetic differences between animals in live weight of cows at 5 years of age. Higher EBVs indicate heavier mature weight.

Milk (kg): Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam. Higher EBVs indicate heavier live weight.

FERTILITY

Days to Calving (kg): Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving. Lower EBVs indicate shorter time to calving.

Scrotal Size (cm): Genetic differences between animals in scrotal circumference at 400 days of age. Higher EBVs indicate larger scrotal circumference.

RECESSIVE GENETIC CONDITIONS

The genetic status of an animal is subject to change and will be re-analysed and adjusted each week as DNA test results of relatives are received. **For information on recessive genes visit www.angusaustralia.com.au**.

KENNY'S CREEK COW FAMILIES

BARA FAMILY

Started with the purchase of K150 in 1991, she was a 1990 drop calf. K150 grew into a moderate framed cow, very docile, fertile and trait leading carcase. Showing tremendous longevity and living until nearly 22 years of age. Now she is +4.3 Calving Ease and +2.1 IMF with 91 registered progeny in 6 herds. Some standout daughters are U72 with 14 progeny, Q120 with 66 progeny, Y120 with 22 progeny and A341 and D147. The Bara family continues to impress these traits now.

FINKS MISS FAMILY

Embryos were imported from Fink Beef Genetics, Kansas USA in 2001. The donor cow was Finks Miss 8315 and the sire was GAR Precision 1680. From these embryos there were 8 daughters. Kenny's Creek used X56 as a donor cow resulting in 12 progeny. Other females from these embryos are X34, purchased by Welcome Swallow, X44, purchased by Old Bundemar and X51, purchased by Bill Cornell and St. Paul's Angus. Our top priced cow in 2014 was D118 purchased by Moore Park Livestock, Glen Innes. The Finks Miss family has a very consistent phenotype and extra thickness and body depth.

MITTAGONG FAMILY

V254 purchased from Te Mania in 2004, she was a productive donor cow having 87 progeny in 5 herds. Her daughters have been donors at Sterita Park, Te Mania and Paringa. Daughters have bred on particularly well, like C27 with 28 progeny, who was sold in 2014 to Redbank Angus. Sons of V254 have regularly topped bull sales. The Mittagong family breeds exceptional phenotype and strong maternal dams.

PATRIOT FAMILY

Gets its name from sire Lord Patriot, the corner stone cow was T97 with 55 progeny. Other donor cows have been W37 with 62 progeny and X320. The Patriot cow line is one of the bigger framed cow families at Kenny's Creek.

SATURN FAMILY

Started with Scotch Cap OB45 embryos purchased from Ardrossan Angus. V82 was the most proficient donor of this family with 63 progeny. A couple of daughters carried on as donors, C711 has 28 progeny and was sold to Bannaby Angus in 2011. Her flush sister C715 had 48 progeny. The Saturn family is a moderate frame line with very good maternal and carcase qualities.

WILCOOLA FAMILY

Kenny's Creek purchased T138 from Ardrossan, a big framed matron by 036 x Q82. T138 was born in 1998 and her IMF EBV still stacks up well at +3.2 with 28 progeny recorded. The Wilcoola family are typified by large framed cows with good udders and rib angle.
